

# Yash Prakash Mishra

Full-Stack Engineer — React · TypeScript · Node.js

+91 84007 93384 · mishra.yash3443@gmail.com · linkedin.com/in/yash-prakash-mishra-34063016a · github.com/xcalibre1

Open to relocation to Sofia — office-first

## PROFESSIONAL SUMMARY

Full-stack engineer with 5+ years shipping production features end-to-end — **React and TypeScript** on the front, **Node.js and PostgreSQL** behind them. Owned and led the complete rebuild of Lenskart's core shopping flows (homepage, cart, checkout, order tracking) in React, Redux and TypeScript for its UAE launch; at Novatr launched a Next.js web platform and **defined the Node.js BFF contracts** that its Admin, LMS and web surfaces run on. FinTech throughout: multi-gateway payments, loan origination and servicing for **10,000+ active loans** — domains where the edge cases are the work. Comfortable in a **multi-stack codebase** (Node.js, PostgreSQL, Kafka, Redis, AWS, Docker), and used to owning integrations, tests, observability and production support rather than handing them off.

## CORE SKILLS

|                            |                                                                                                                                                                                             |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Frontend                   | React.js, Next.js (App Router), Redux, TypeScript, JavaScript (ES6+), component design patterns, HTML5, CSS3, SVG, WebXR                                                                    |
| Build & Performance        | Webpack (route-based code splitting, tree shaking, bundle analysis), Lighthouse, time-to-interactive, graceful degradation                                                                  |
| State & Real-time          | Redux, REST data fetching, Server-Sent Events, Socket.io, Redis-backed live updates                                                                                                         |
| Full-stack & API Contracts | Node.js BFF pattern, API contract definition, RESTful design, OpenAPI/Swagger, input validation & schema guards, JWT auth, webhooks, idempotent API design, owning third-party integrations |
| Backend & Databases        | Node.js, TypeScript, Express.js, NestJS, Fastify; PostgreSQL, MySQL, ClickHouse, MongoDB, Redis, Sequelize, Prisma                                                                          |
| Events & Messaging         | Apache Kafka, BullMQ, AWS SQS, event-driven architecture                                                                                                                                    |
| Testing & Code Quality     | Jest, Supertest, Mocha, unit & integration testing, Postman, pull-request review across a 5-engineer team                                                                                   |
| Cloud & CI/CD              | AWS (EC2, S3, CloudFront, SQS, IAM, KMS), Docker, GitHub Actions, Jenkins, Kubernetes (working knowledge)                                                                                   |
| Observability & Production | ELK Stack, structured logging, distributed tracing, circuit breakers, self-healing retries, on-call and incident reduction                                                                  |
| Architecture               | Microservices, distributed systems, multi-tenant architecture, Strategy / Factory / Singleton / Observer, HLD & LLD                                                                         |

## PROFESSIONAL EXPERIENCE

**Novatr — Senior Software Engineer** (Backend Developer → Senior Software Engineer) Aug 2023 – Present  
*Remote · Y Combinator-backed SaaS platform, 24/7 on AWS*

**Stack:** TypeScript, React.js, Next.js, Node.js, NestJS, Express.js, PostgreSQL, ClickHouse, Redis, Apache Kafka, BullMQ, Socket.io, AWS, Docker

### Web surfaces & full-stack ownership

- Launched a freemium web platform (**Next.js, React.js, TypeScript, Node.js**) end-to-end — scoping, components, APIs, production — as a lead-generation funnel driving new user acquisition across enterprise cohorts.
- Defined and owned the **Node.js BFF layer and its API contracts** across Admin, LMS and web surfaces, so client needs shaped the contract instead of backend response shapes leaking into components.
- Built a multi-layer **JWT authentication service** (Passport.js) handling token issuance, rotation and validation across all three surfaces.
- Delivered a real-time quiz engine (Node.js, **Socket.io**, Redis) powering live cohort sessions, tuned for **low-latency concurrent interactions** with graceful degradation under load.

### Back-office & internal tooling

- Architected **centralised RBAC across 5+ internal tools** (Node.js, TypeScript, PostgreSQL) with role inheritance, permission scoping and audit logging — **60% fewer access incidents**; this is the permission model support and ops users work under.
- Built a CMS backend (NestJS, PostgreSQL) with content lifecycle workflows and versioning — **85% faster cohort creation** and recurring on-call incidents eliminated.
- Architected the B2C-to-B2B move as a **multi-tenant** system with tenant-level data isolation, per-tenant configuration and enterprise onboarding workflows — **onboarded 5+ enterprise clients** as technical point of contact.

## Integrations, payments & modernisation — Novatr

- Architected a **gateway-agnostic payments platform** integrating four providers (Stripe, Razorpay, Affirm, Jodo) using **Strategy and Factory patterns** for runtime gateway selection; **owned each integration end-to-end** from POC to production, not just its client code.
- Designed a centralised webhook handler for all four gateways with self-healing retries, event deduplication and Kafka-based reconciliation — **80% less manual error resolution**; added circuit breakers (opossum) for failover when a provider degrades.
- Drove a **stack migration off a legacy payments system** onto a ClickHouse-backed platform with **zero downtime** (Node.js ETL, schema validation, integrity checks, tested rollback), retiring the technical debt that was slowing delivery.
- Introduced **Kafka event pipelines** (with BullMQ) for payments, user lifecycle and transactional email, decoupling services and improving fault tolerance platform-wide.

## Review, support & team

- **Led a team of 5 engineers** across architecture decisions, **pull-request review** and delivery timelines; partnered with product, design and QA from discovery through deployment, and was technical point of contact for enterprise clients.

## OLX Autos — Software Engineer

May 2022 – May 2023

Remote · Used-car financing infrastructure for Latin America (FinTech lending)

**Stack:** Node.js, TypeScript, Express.js, PostgreSQL, MySQL, Sequelize, REST APIs, Docker, AWS

- Built and owned foreclosure and manual repayment flows in the **Loan Management System**, automating loan closure and repayment tracking for **10,000+ active loans in Chile** and replacing a fully manual process.
- Designed **loan lifecycle state machine APIs** with input validation guards at every transition — the kind of **intricate, edge-case-heavy financial flow** where a wrong state transition costs real money — cutting manual intervention by **40%**.
- Designed risk analysis and credit scoring workflows in the **Loan Origination System**, reducing credit approval time by **30%** and improving decision auditability.
- Built a reusable PDF generation library (PDFKit, Handlebars) for programmatic invoices in loan disbursement; served as technical point of contact for the Chile operations team across a **9+ hour time-zone gap**.

## Lenskart — Software Engineer (Frontend)

Apr 2021 – Apr 2022

India's largest eyewear retailer · Exit: project concluded on successful UAE market launch

**Stack:** React.js, Redux, TypeScript, JavaScript (ES6+), Next.js, Webpack, WebXR, Node.js (BFF), REST APIs

- Owned and led the **complete rebuild of core shopping flows** — homepage, cart, checkout, order tracking — in **React.js, Redux and TypeScript** for the UAE market launch: **30% faster launch** with improved Lighthouse scores, as primary frontend point of contact for the client go-live.
- Applied **route-based code splitting, tree shaking and bundle analysis** (Webpack), cutting initial JS payload and improving **time-to-interactive** across every key page.
- Integrated **WebXR** immersive try-on components and Google reCAPTCHA, lifting engagement and reducing fraudulent checkout attempts.
- Built against a **Node.js BFF** layer, defining response contracts with backend teams — where the full-stack habit started.

## SELECTED PROJECT

### BullMQ Dashboard — open-source operations tooling

2025

Next.js (App Router), TypeScript, Node.js, Redis, ioredis, BullMQ, Express.js, Docker, SVG, Server-Sent Events · [github.com/xcalibre1/bullmq-dashboard](https://github.com/xcalibre1/bullmq-dashboard)

- **Problem:** Bull Board-style tools give visibility into queues but no operational control — no retrigger with an edited payload, no bulk retry, no live updates.
- Built a **Next.js + TypeScript back-office dashboard** with **Server-Sent Events** for live queue stats, an editable JSON payload editor, a 24-hour throughput chart in pure SVG, plus payload field search, bulk retry, promote, pause and resume.
- API routes backed by a **Redis singleton** (ioredis) and a cached BullMQ Queue instance for near-zero per-request overhead; Docker Compose for one-command self-hosting. **Adopted by engineering teams globally.**

## EDUCATION

B.Tech, Computer Science — Rajkiya Engineering College, Sonbhadra

Jul 2016 – Jun 2020

## ADDITIONAL

- **Open source:** author and maintainer of BullMQ Dashboard (Next.js, TypeScript), used by engineering teams globally.
- **Relocation:** open to relocating to Sofia for an office-first role. Five years of distributed work across India, Latin America and the Middle East — strong written communication, and glad to be back in a room with a team.
- **Interests:** banking and payments products, frontend architecture, developer tooling.
